2019 questions to industry

The following questions are based on queries and feedback received from industry since the DSB went live in October 2017. The purpose of the consultation is to obtain industry's view is to ensure that the DSB focuses its attention on those potential changes which are the most valuable. The features identified as most desired by industry (because of this first round of consultation) will be subsequently analyzed in greater detail. Additional detail on costs and functionality will be provided as part of the second consultation to allow industry to feedback on whether it wishes the DSB to proceed with the implementation in 2019.

Proposed Format for Industry Responses to the DSB Consultations

- Consultation responses should be completed using the form below and emailed to industry consultation@anna-dsb.com
- The option is provided for respondents to stipulate whether the response is to be treated as anonymous. Note that all responses are published on the DSB website and are not anonymized unless specific requests are made
- Where applicable, responses should include specific and actionable alternative solution(s) that would be acceptable to the respondent to ensure that the DSB can work to reflect the best target solution sought by industry (within the governance framework of the utility)
- As with prior consultations, each organization is permitted a single response
- Responses should include details of the type of organization responding to the consultation and
 its current user category to enable the DSB to analyze client needs in more detail and include
 anonymized statistics as part of the second consultation report
- Responses must be received by 5pm UTC on 13th June 2018
- All consultation related queries should be directed to industry consultation@anna-dsb.com

Section 1: User Categorization and Fees

#	Question for Consultation	Participant's Response
1	Do you agree with the proposed user categorization? If not, what alternative(s) do you propose? Wherever possible please refer to public data made available by the DSB in your response.	Please see our response to Question #2 below. There should be a user category that provides more efficient access to the DSB ISIN database free of charge in order for market participants to understand and analyse the MiFID II transparency data published by APAs and trading venues.
2	Do you concur with the proposed user fee model? If not, what alternative do you propose? Wherever possible please refer to data made available by the DSB both as part of this consultation and publicly.	We do not believe that the proposed user fee model is consistent with the core MiFID II objective to increase transparency regarding OTC derivatives trading activity. In order for MiFID II to successfully increase transparency as intended, market participants must be able to (1) access the pretrade and post-trade transparency data published by APAs and trading venues, and then (2) understand and analyse what that data means in practice. ESMA has now further clarified the requirement that APAs and trading venues must publish the MiFID II transparency data to the public <u>free of charge</u> 15 minutes after publication (see recent

ESMA Q&As at page 24 of https://www.esma.europa.eu/sites/default/files/library/esma70-872942901-35 qas transparency issues.pdf). This establishes a level playing for market participant access to MiFID II transparency data.

However, access to the transparency data published by APAs and trading venues is largely meaningless if market participants are unable to understand and analyse what that data means in practice. This is where access to the DSB ISIN database is required, as many of the economic attributes of a particular OTC derivative are not separately published by the APA or trading venue. Instead, the ISIN is published and it is up to market participants to determine what the economic attributes associated with a particular ISIN are.

In order to maintain consistency with the MiFID II requirement that market participants be provided with the published transparency data <u>free of charge</u>, we believe that the DSB should also facilitate free access to its ISIN database for queries / searches by identifier or by attributes, with query / search results available in an electronic format that can be directly and automatically read by a computer. The current "Registered User" category is insufficient for these purposes, as the web access provided is not conducive to multiple searches, search queries are limited to 5 results, and no API access is permitted. By imposing fees on market participants solely seeking to understand the transparency data published by APAs and trading venues, the DSB undermines MiFID II's aim of ensuring that all market participants can benefit from increased transparency free of charge.

Taking into account the cost-recovery mandate of the DSB, we recommend that user fees be solely applied to market participants who are given the ability to create new ISINs.

3

The DSB currently offers identical terms to all users in a particular category. Should the license terms for commercial intermediaries be different from other user license terms? If so, please

Please see our response to Question #2 above. We do not support any licensing terms that could impede efforts to analyse the MiFID II transparency data that is required to be published free of charge. Third-party data analytics firms play an important role in analysing published data in order to improve market transparency for all investors.

	specify alternative terms for commercial intermediaries.	
	commercial intermediaries.	
4	The DSB's user fee model assumes continued use over the year. Do you have workflows that require one-off DSB connectivity? If so, please could you provide examples e.g. one-time data consumption, one-off bulk creation of OTC ISINs, etc.	
5	What additional user categories and/or charging models do you want the DSB to provide, if any?	
Sec	ction 2: Functionality	
	The DSB currently provides for web-interface (GUI) users to download search results in JSON (machine readable) format.	
6	a. Do you believe the DSB should extend the types of download formats considering the diverse user base (ref. section 2 of the DSB consultation presentation)?	
	b. If yes, do you believe that csv (comma separated values) is a reasonable alternative format for downloaded	

	1 1: 2:5	
	search results? If	
	not, please provide	
	preferred	
	alternatives. Note	
	that the csv format is	
	specifically	
	suggested due to	
	user requests since	
	launch.	
	The DSB currently provides	
	two automated integration	
	methods (ReST and FIX APIs)	
	but has also received	
	interest for Excel API	
	integration to allow easier	
	manipulation and access to	
	OTC derivatives reference	
	data.	
	a Dayou think the DCD	
	a. Do you think the DSB	
	should provide Excel	
	API integration as a	
	third API option?	
	b. If Excel API	
7	integration is to be	
	provided, should the	
	functionality include	
	both ISIN creation	
	and search/retrieval,	
	or is a subset of the	
	functionality	
	sufficient? If a	
	subset, please	
	provide the	
	appropriate scope of	
	the functionality.	
	c. Should the DSB	
	consider any other	
	integration options –	
	programmatic or	
	otherwise - such as	
	ivatives Service Bureau 2018	

	T	
	an API that enables	
	users to more easily	
	obtain data in a	
	human readable	
	format? If yes,	
	please explain what	
	type of API would	
	best suit your needs.	
	The DSB currently updates	
	its product templates	
	(request and response) each	
	time an enumeration list or	
	value changes. For example,	
	a new reference rate,	
	underlying index or currency	
	could need to be added to	
	the list. This may result in a	
	two- to four-week	
	development, testing and	
3	deployment cycle on each	
	occasion (depending on the	
	nature of the change), which	
	in turns requires industry to	
	also follow a similar process.	
	·	
	Do you believe this approach	
	needs to be altered or is the	
	current process and time to	
	market satisfactory for your	
	purposes?	
	The DSB currently provides	
	end-of-day OTC-ISIN record	
	files in JSON format on a	
	daily basis and has received	
	some requests to also make	
9	available (a) consolidated,	
	on-demand data for any	
	user-defined period and (b)	
	such consolidated snapshots	
	to be provided in comma	
	separated value (csv) format	

	to allow a broader set of users to be able to consume the data in a less technology intensive manner. Do you concur with this view? If yes, please could you provide examples of how this additional functionality would aid your integration with the DSB.	
10	The existing DSB GUI ISIN search functionality is targeted at technical users who understand the Lucene programming language (see here: https://www.annadsb.com/download/dsb-search-1-3/). This means organisations and end-users with small IT departments may not be able to take advantage of the full search capabilities of the DSB GUI.	
	Bearing in mind the additional development effort that would be required, should the DSB enhance its GUI to allow non-technical users to search for ISINs by any attribute across any product template? Some user feedback has been received asking the DSB to provide analytics that	
11	would allow users to have real-time insight into ISIN creation trends within the DSB.	

	a. Do you concur?	
	b. If yes, what analytics	
	would you like to see	
	the DSB make	
	available to the	
	market?	
	market:	
	What additional user	
12	workflows, if any, do you	
	want to see the DSB	
	support?	
Sec	ction 3: Service Levels	
	Are you satisfied with the	
	DSB's current client service	
	levels?	
	a. If not, what more do	
	you believe the DSB	
	could do to improve	
	the level of service	
	available to you?	
	b. The DSB has	
	received requests	
	from users to	
	provide named	
13	account managers	
	for single point of	
	contact for queries.	
	The DSB currently	
	does not have	
	personnel providing	
	such a function and	
	would need to hire	
	additional staff to	
	fulfil this need.	
	Do you believe the	
	DSB should have	
	account managers?	

If yes, please explain why and provide your proposal for an appropriate ratio of account managers to users for each category of DSB user. c. The DSB has received requests from users to provide telephone support in addition to the existing emailbased support. The DSB currently does not have the personnel to provide such a function and would need to hire additional staff to fulfil this need. Do you want the DSB to enhance its support model to also include a phone-based helpdesk during operating hours? If yes, please explain why this is needed, with reference to the categories of DSB users that you believe telephone support should be made available to. If a phone based model is required, do you believe an

		-	
		external ticketing	
		system should be	
		implemented to	
		track calls made to	
		the DSB?	
	d.	What else (if	
		anything) could the	
		DSB do more/ less to	
		better service your	
		institution's needs?	
	The cu	rrent DSB	
	perfori	mance SLA is to	
	proces	s 99% of all messages	
	across	all workflows within	
	1,000n	ns. The DSB proposes	
	a more	e targeted	
	perfori	mance SLA based on 3	
	individ	ual workflows:	
	a.	ISIN Record retrieval	
		workflow: 99% of all	
		lookups (via an ISIN	
		identifier) to occur	
		within 500ms	
	b.	ISIN Create Request	
		workflow: 99% of all	
14		ISIN create requests	
		to be processed	
		within 1,000ms	
		(both for ISIN	
		creation and return	
		of existing ISIN	
		where the ISIN	
		already exists)	
	C.	ISIN Search	
		workflow: 99% of all	
		searches (via	
		wildcard attributes)	
		to occur within	
		5,000ms	
		5,0001113	

	Is the proposed revision to
	the model and latency
	metrics appropriate? If not,
	what do you believe is more
	appropriate and why?
	The DSB has received user
	requests to stay abreast of
	upcoming market changes
	and enable the DSB to
	provide timely
	implementation timelines
	(e.g. SONIA reform,
	introduction SOFR, currency
	code updates, reference
	data requirements for FTRB,
	etc.). At this time the DSB is
	not integrated within
	existing industry fora which
	has resulted in user feedback
	to the DSB that some
15	notifications to the DSB of
	impending industry changes
	have occurred late, resulting
	in the late creation of
	associated ISINs.
	a. Do you believe the
	current level of DSB
	integration with
	industry is
	sufficient? If no,
	please provide
	examples of how the
	DSB can be better
	integrated with
	industry.
	b. Should the DSB
	explore membership

	of industry bodies to better integrate with user expectations and workflows? If yes, which bodies (for example AFME, EVIA, FISD, FIX, ICMA, ISDA, SIIA), bearing in mind that membership will require additional resources and potentially expenditure on membership fees? c. Are there any other actions the DSB should take for better integration with industry?	We recommend that the DSB expand representation on the Product Committee in order to ensure that a more diverse set of industry perspectives are taken into account. For example, the recently constituted Technology Advisory Committee includes 40 firms, including systematic internalisers, trading venues, trade associations, independent experts, and regulatory observers. In contrast, the Product Committee currently only includes 9 firms, with no trade associations or independent experts. The Product Committee is critical in defining the ISIN attributes for OTC derivatives and more diverse representation will help the DSB improve overall integration with industry and regulators globally.
16	The DSB introduced a new web-site (www.anna-dsb.com) in 2018 that contains amongst other items, the DSB's performance SLAs, the DSB User Agreement, the DSB's availability hours, all technical documentation and all DSB notifications.	

	What additional	
	transparency information	
	would you like to see made	
	available and why?	
	The current DSB availability	
	hours is 24*6, from Sunday	
	12 noon UTC to Saturday 12	
	noon UTC and reflects the	
	DSB's mandate to support	
	RTTS-23 reporting. The DSB	
	has heard that in some	
	circumstances this may not	
	be sufficient; e.g., where	
	OTC-ISINs are being created	
	to allow for RTS-2 reporting.	
17	Bearing in mind that	
	additional availability hours	
	will require additional	
	resources:	
	a. Are the current	
	availability hours	
	appropriate?	
	b. If not, what are the	
	most appropriate	
	availability hours?	
	c. What should be the	
	downtime period for	
	holidays (if any)?	
	Programmatic Users are	
	currently able to submit up	
	to 60 messages per minute	
	via ReST and have one	
	message in flight via FIX.	
18	Details are:	
	A. FIX connected Users	
	streaming messages	
	to the DSB Service	
	must not have more	
	than 1 message	

	learnerised of areata	
	(comprised of create	
	or search or any	
	other message) per	
	connection pending	
	acknowledgement	
	from the DSB Service	
	at any given time;	
	B. Users connecting via	
	REST API (as set out	
	in the Connectivity	
	Policy) are permitted	
	to make up to 60 API	
	calls (comprised of	
	create or search or	
	any other calls) per	
	minute per	
	connection subject	
	to the overall cap set	
	out in the acceptable	
	use policy;	
	Do you believe the DSB	
	should revisit these	
	thresholds? If yes, do you	
	believe the rate should	
	increase or decrease given	
	that programmatic users	
	may have up to 10	
	simultaneous API	
	connections? Please provide	
	acceptable alternative	
	thresholds if you believe that	
	the current values should be	
	amended.	
	Programmatic Users are	
	currently subject to the	
	following weekly caps to	
19	ensure that the DSB	
	infrastructure continues to	
	offer stability:	
	,	

	A.	Users connected via	
		an API (FIX or ReST)	
		must not send more	
		than 200 invalid	
		messages a day or	
		more than 1,000 in a	
		calendar week	
		across all API	
		connections;	
	В.	Users connected via	
		an API undertake not	
		to send the DSB	
		Service more than	
		100,000 search	
		requests or 50,000	
		ISIN creation	
		requests in any given	
		calendar week	
		across all API	
		connections.	
	Do you	believe the DSB	
	should	revisit these	
	thresh	olds? If yes, do you	
	believe	the rate should	
	increas	se or decrease given	
	that us	ers are able to have	
	· ·	.0 simultaneous API	
		ctions? Please provide	
	_	able alternative	
		olds if you believe that	
		rent values should be	
	amend	ea.	
	Tocha:	cal Support Outsida	
		cal Support Outside pility Hours:	
20			
		er to save on staffing	
20		the DSB does not	
		tly monitor the system	
		e the mandated	
	availab	ility hours. Instead,	

support staff start their rotas one hour before the availability start time.
Consequently, a system failure during the unavailability hours that lasts longer than one hour will impact the DSB uptime SLA.
The DSB is aware that the risk of system failure is typically higher at start of week because of system restarts that typically occur during this period.
Therefore, the DSB has

Therefore, the DSB has considered two options to address this risk:

- 1. Institute an on-call rota during the 24-hour unavailability period so that serious failures are picked up on a reactive basis and worked on as soon as they occur.
- 2. Institute an additional set of support rotas for the unavailability hours, to ensure continuous proactive monitoring of the system. This option will also result in the 24x7 availability of the technical support function.
- a. Do you agree that the risk outlined

		above should be	
		addressed by the	
		•	
		DSB?	
	b.	If yes, do you have a	
		preference on which	
		option provides the	
		optimal outcome	
		bearing in mind that	
		the reactive support	
		option (1) will likely	
		incur less costs to	
		implement than	
		implementing the	
		proactive 24x7	
		availability of	
		technical support in	
		option (2)?	
	c.	Are there any other	
		options that the DSB	
		should explore to	
		mitigate the risk	
		outlined above?	
C 0 0	tion 1.	Comico Avoilability

21	a.	Is this appropriate?	
	b.	What should be the	
		downtime period for	
		holidays (if any)?	
	Multip	le Primary Regions:	
	The ex	isting DSB Disaster	
22		ery (DR) architecture is	
22		on a single primary	
		n Web Services (AWS)	
		in the EU that is in	
		25	

continuous use, and a second passive DR Region in the US that is only used if there is a disaster in the AWS EU Region.

This means the DR site is only actively tested for effectiveness once a year as part of an annual DR test.
The DSB would like to understand industry appetite for a revised architecture that allows for both AWS regions to be primary, by implementing a system where the primary region flip-flops between the two regions on a regular basis (for example, every week or month).

Such an approach will ensure that both Regions are fully in sync on a continuous basis, thereby lowering the risk of failover to DR uncovering issues only at the time of failover.

Do you believe the DSB should move to such a primary / primary architecture across the two AWS Regions as a means of increasing the robustness of the DSB's DR plans? What other factors should the DSB consider for its DR plans? (e.g. is the preservation of connectivity configuration if the primary were to flip-flop

an important consideration for API users?) Multi-cloud DR: The DSB's operations are hosted entirely on the AWS cloud across two separate AWS Regions, utilising 3 separate Availability Zones within each Region. The DSB believes this architecture mitigates all risks apart from a total outage of the cloud operator itself. Mitigating this remaining risk will require the DSB to consider a multi-cloud hosting model to remove the dependency on a single operator (AWS). Do you believe the DSB should mitigate the risk of collapse of an entire cloud operator by moving to a dual-cloud deployment? Section 5: DSB Access and Usage Agreement The DSB does not currently incur penalties for failing to meet SLAs and has received

about the uncertainty in the
DSB's current fee model. Do
you have a view on
alternative models that

26	could be applied across the spectrum of DSB user types? Agreement can be changed unilaterally – Do you have a view on how the DSB could address the risk that unforeseen events require a contract change, especially given the start-up nature of the utility which increases likelihood of such risks?		
27	The DSB Access and Usage Agreement requires intermediaries to supply details of any client who should be a paying member of the DSB. Do you have a view on whether this is appropriate? If you disagree with the DSB's current approach, please propose an alternate mechanism that could be instituted to ensure that users who sign DSB contracts are not disadvantaged by users who abuse the system by going through an intermediary but not paying.		
Sec	Section 6: AOB		
28	What other operational enhancements would you like to see the DSB make?	We believe that the DSB should continue to focus on strengthening its technology infrastructure to reduce the occurrence of systems issues and improve overall resiliency. The DSB should document through policies and procedures the steps it is taking to improve the capacity, resiliency, and security of its technological systems, including business continuity and disaster	

	What additional services	recovery plans. In addition, the DSB should keep records of any technological issues that do occur along with the corrective actions taken, including measures designed to prevent future reoccurrences.
29	would you like to see the DSB provide? Please provide examples or business cases where relevant.	
30	What are the top three changes you would like to see the DSB make to better serve your institution's needs (including any that may have been listed above)? Listed in order of preference.	1. The DSB should work with market participants and regulators to improve data quality. One of the core objectives of MiFID II was to increase transparency regarding OTC derivatives trading activity. However, this objective is undermined to the extent ISINs assigned to specific OTC derivatives contain fields that are populated incorrectly. For example, the "Delivery Type" field is not being populated in a consistent manner for many Rates instruments. We understand that the "Delivery Type" field should only be populated with "Physical" if the notional currency is non-deliverable, leading to settlement occurring in a different currency. However, many ISINs with "Delivery Type" set to "Physical" are being created for Rates instruments denominated in deliverable currencies. We urge the DSB to proactively engage with the market participants who are populating this field incorrectly in order to resolve the issue. Similarly, the field "Reference Rate" can currently be populated with outdated indexes. We understand that the DSB opted to populate the "Reference Rate" field in a more granular manner than is contemplated by ESMA in RTS 23 (which references the ISO index identifiers). However, the list used by the DSB contains outdated indexes such as "EUR-EURIBOR-Telerate" (Telerate was purchased by Reuters in 2005 and absorbed into its market data
		unit). We urge the DSB to ensure that the "Reference Rate" field can only be populated with current, up-to-date indexes.

2. The DSB should assist market participants and regulators in making more accurate "traded on a trading venue" determinations

Under MiFID II, the determination of whether an OTC derivative is considered "traded on a trading venue" ("ToTV") is fundamental, as OTC derivative instruments executed off-venue will only be subject to transaction reporting and transparency requirements if the instrument is also considered ToTV.

We understand that the DSB intends to provide functionality to help market participants determine whether a specific OTC derivative is ToTV. However, this DSB service is expected to solely rely on ESMA's FIRDS database, which is only updated on a T+1 basis, meaning that an ISIN first traded on-venue today will only appear as ToTV in the FIRDS database tomorrow. This one-day lag impacts a variety of OTC derivatives where a new ISIN is being created each day for an instrument of a given tenor (e.g., a 10 year interest rate swap) since the "expiry date" changes each day. As a result, applying a one-day lag to ToTV determinations means that many OTC derivatives executed off-venue could be excluded from the MiFID II transparency regime.

We do not believe that such a result will be viewed favourably by regulators, and therefore urge the DSB to proactively work with regulators to develop solutions to more accurately monitor which OTC derivatives are ToTV. This could include (i) collecting data directly from DSB-user trading venues as reference data submissions are made to ESMA in order to provide real-time ToTV determinations or (ii) ensuring ISINs are generated for future expiry dates and pre-loaded into the FIRDS database in order to negate the impact of the one-day lag.

Please insert any other comments you wish to provide

We recommend that the DSB prioritize constructive engagement with regulators in order to improve the ISIN identifier for OTC derivatives, with the overarching goal of increasing market transparency.

For example, the ISIN does not currently contain a field for either the "effective date" or the "tenor" of an OTC derivative. As a result, there is currently no way to differentiate between spotstarting and forward-starting interest rate derivatives with the same expiry date. In order to improve market transparency, we recommend that the DSB engage with regulators to include such a field as part of the ISIN.

In contrast, the ISIN contains a field for the "expiry date" of an OTC derivative. Unfortunately, this means that a new ISIN has to be created each day for the same interest rate derivative, since a 10-year interest rate swap traded today has a different expiry date than a 10-year interest rate swap traded tomorrow. While we appreciate that the "expiry date" field was included by ESMA in RTS 23, we recommend that the DSB continue to highlight the practical consequences arising from the current approach from an ISIN creation standpoint. Ultimately, we believe that consideration should be given to removing the "expiry date" field from RTS 23, and the ISIN, enabling a single constant ISIN to be assigned to OTC derivatives based on tenor.
