

NOTIFICATION: DSB UAT - Updates to REST Enterprise HTTP response code during maintenance

Audience: All REST Enterprise Users

Notification details:

The purpose of this note is to inform DSB users that the HTTP response on REST enterprise during the maintenance will be updated. Additional details are listed below:

- Currently the UAT REST Enterprise Service is giving **HTTP 404** (NOT FOUND) instead of **HTTP 503** (SERVICE UNAVAILABLE) during maintenance period therefore we need to implemented this change on 10 February 2018 10:00 AM UTC to correct this response.
- After this change all UAT REST Enterprise users will receive HTTP 503 response during the maintenance period.
- This change does not impact the REST service and the standard maintenance period of 12 PM Saturday to 12 PM Sunday will still be in effect.

Action Required:

- None: REST Enterprise users are expected not to send any ISIN request during the maintenance period but any attempt will now result in HTTP 503 instead of HTTP 404.

This work will be scheduled on production once UAT implementation is validated successful and a separate notification will be sent out.

Let us know if you have any questions/concern.
