

16-April-2021

NOTIFICATION: DSB UAT Disaster Recovery Test **Action Required**

Dear User,

Following discussions with the DSB's Technology Advisory Committee (TAC) in March 2019 (<u>here</u>), the DSB proposed that disaster recovery testing will be conducted in an inter-region manner with its users. This programme incorporates several phases, beginning with work to ensure all client types can route to and integrate with the DSB's UAT environment in the DR availability zone, located in North America. Undertaking this testing will ensure your ability to maintain UAT service during the DR period.

The DSB reached out to its users in September 2019 (<u>here</u> and reminder <u>here</u>), to request assistance with the disaster recovery testing activities. Following the April 2021 TAC meeting, the TAC has approved the UAT-DR test to be undertaken in Q3 2021. Please find the more details on the UAT-DR test <u>here</u>, which includes timelines as well as required user actions to ensure continued access to the DSB's UAT environment (next release).

Please let us know if you have any questions.

Regards, DSB Technical Support Team
