Title	RATES SWAP Inflation Basis Zero Coupon Template Definition		
<b>Background</b>	<p>The following CRF presents a specification for the generation and retrieval of a Unique Product Identifier for the following product:</p> <ul style="list-style-type: none"> <li><b>Rates : Swap : Inflation_Basis_Zero_Coupon</b></li> </ul>	<b>DSB-ID</b>	<b>UPI-0096</b>
		<b>Type</b>	New Template
		<b>Owner</b>	J.Lim
		<b>Version</b>	6
		<b>State</b>	Draft
<b>Terms of Reference</b>			
<b>Scope</b>	<ul style="list-style-type: none"> <li>This CRF specifies the product definition required for the generation / retrieval of a UPI only.</li> <li>This CRF covers both the input (Request) and output (Record) templates.</li> <li>Support for local jurisdiction / alternate underlier identifier input is currently out of scope.</li> <li>Support for CFI 2019 values is currently out of scope.</li> </ul>		
<b>Requirements</b>	<ul style="list-style-type: none"> <li>The product definition will conform to ISO 4914 (UPI).</li> <li>Where possible, the product definition is to be based on the attributes, values and behaviour of the equivalent OTC ISIN.</li> <li>The product definition will return a product short name (FISN).</li> <li>All UPI records stored on the DSB RDL will include the ISO 10962 (CFI) code associated with the UPI along with an equivalent text value for all attributes that are included in the definition of the CFI.</li> </ul>		
<b>Dependencies</b>	<ul style="list-style-type: none"> <li>This specification is dependent on final sign-off of the ISO 4914 (UPI) specification.</li> <li>This specification is dependent on PC approval for the use of the OTC ISIN definitions as a basis for the UPI.</li> <li>This specification is dependent on PC approval for the inclusion of ISO 4914 (UPI) conditional attributes.</li> <li>This specification is dependent on TAC Approval for the DSB approach to ISO 10962 (CFI:2019) migration.</li> <li>This specification is dependent on the provision of a human-readable alias for the primary underlier for inclusion in the Short Name (FISN) and a human-readable alias for the Contract Specification.</li> <li>The format of the Short Name is dependent upon the outcome of the ISO 18774 (FISN) systematic review.</li> </ul>		
<b>Assumptions</b>	<ul style="list-style-type: none"> <li>This specification assumes that, unless stated, all values and behaviours are based on those of the equivalent OTC ISIN product definition.</li> <li>This specification assumes that no input values are to be defaulted by the system.</li> <li>This specification is based on the current ISO 4914 (UPI) specification (CD) – including attributes that are not currently supported by the equivalent OTC ISIN.</li> <li>This specification is based on the DSB's current equivalent OTC ISIN product definition.</li> <li>This specification is based on the attributes and values defined in ISO 10962 (CFI:2015).</li> <li>In order to provide an example Short Name, this specification defines a format for this attribute that may not conform to the eventually agreed FISN format for the UPI. This specification assumes that the Short Name is defined using the same attributes (where available) as the OTC ISIN Short Name.</li> <li>Where possible, this specification derives GUI details from the ISO 4914 (UPI) specification for attributes that are not included in the current OTC ISIN product definition.</li> </ul>		

- The display information in the GUI for the existing attributes (and values) are taken from the OTC ISIN. If such information contains an "ISIN" in the description, replace the value into "UPI".
- The specification for UPI does not include expiry date as part of the attributes, hence "expired" status does not apply.

**Normalization**

**1. Reference Rate Term Value and Reference Rate Term Unit**

- If Reference Rate Term Unit = "DAYS" and Reference Rate Term Value is divisible by 7, record it in weeks

Reference Rate Term Value/ Other Reference Rate Term Value	7	→	Reference Rate Term Value/ Other Reference Rate Term Value	1
Reference Rate Term Unit/ Other Reference Rate Term Unit	DAYS		Reference Rate Term Unit/ Other Reference Rate Term Unit	WEEK

- If Reference Rate Term Unit = "MNTH" and Reference Rate Term Value is divisible by 12, record it in years

Reference Rate Term Value/ Other Reference Rate Term Value	12	→	Reference Rate Term Value/ Other Reference Rate Term Value	1
Reference Rate Term Unit/ Other Reference Rate Term Unit	MNTH		Reference Rate Term Unit/ Other Reference Rate Term Unit	YEAR

**2. Reference Rate and Other Reference Rate**

For Basis Swap, the input reference rate and other reference rate submitted by users need to normalize to ensure that same UPI is returned for a same set of attributes.

- Order the "Reference Rate" and "Other Reference Rate" alphabetically.
- If the "Reference Rate" is first alphabetically, then record it as "Reference Rate".
- If the "Reference Rate" is not first alphabetically, then record the fields as below:

Reference Rate	→	Other Leg Reference Rate
Reference Rate Term Value		Other Leg Reference Rate Term Value
Reference Rate Term Unit		Other Leg Reference Rate Term Unit

Other Leg Reference Rate	→	Reference Rate
Other Leg Reference Rate Term Value		Reference Rate Term Value
Other Leg Reference Rate Term Unit		Reference Rate Term Unit

If the Reference rate and Other reference rate are identical, the term value and unit will normalize to ensure that singular UPI is returned for same set of attributes.

- If the Term unit is the same, then order the Term Value numerically from lowest to highest.
- If the Term unit is different, then convert the term unit as per order term multiplier below:  
DAYS = 1  
WEEK = 7

	<p>MNTH = 30 YEAR = 365</p> <ul style="list-style-type: none"> <li>Multiply the number of Term value and order term multiplier for both reference rate legs. Then order the equivalent value numerically from lowest to highest as per below:</li> </ul> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;">Reference Rate</td> <td style="width: 20%;">AUD-LIBOR-BBA</td> <td rowspan="6" style="width: 5%; text-align: center; vertical-align: middle;">→</td> <td style="width: 30%;">Reference Rate</td> <td style="width: 15%;">AUD-LIBOR-BBA</td> </tr> <tr> <td>Reference Rate Term Value</td> <td>15</td> <td>Reference Rate Term Value</td> <td>1</td> </tr> <tr> <td>Reference Rate Term Unit</td> <td>DAYS</td> <td>Reference Rate Term Unit</td> <td>WEEK</td> </tr> <tr> <td>Other Leg Reference Rate</td> <td>AUD-LIBOR-BBA</td> <td>Other Leg Reference Rate</td> <td>AUD-LIBOR-BBA</td> </tr> <tr> <td>Other Leg Reference Rate Term Value</td> <td>1</td> <td>Other Leg Reference Rate Term Value</td> <td>15</td> </tr> <tr> <td>Other Leg Reference Rate Term Unit</td> <td>WEEK</td> <td>Other Leg Reference Rate Term Unit</td> <td>DAYS</td> </tr> </table> <ul style="list-style-type: none"> <li>If the Reference Rate Term Value/Unit and Other Reference Rate Term Value/Unit has same equivalent value based on the order term multiplier, the details for the said attributes will be as is in the record template.</li> </ul>	Reference Rate	AUD-LIBOR-BBA	→	Reference Rate	AUD-LIBOR-BBA	Reference Rate Term Value	15	Reference Rate Term Value	1	Reference Rate Term Unit	DAYS	Reference Rate Term Unit	WEEK	Other Leg Reference Rate	AUD-LIBOR-BBA	Other Leg Reference Rate	AUD-LIBOR-BBA	Other Leg Reference Rate Term Value	1	Other Leg Reference Rate Term Value	15	Other Leg Reference Rate Term Unit	WEEK	Other Leg Reference Rate Term Unit	DAYS
