Derivatives Service Bureau (UPI) CHANGE REQUEST FORM

| Version | State | Author | Date | Description |
|---------|-------|---------------|-------------|--|
| 1 | Draft | J. Lim | 17 May 2021 | Initial Document |
| 2 | Draft | J. Lim | 21 Jul 2021 | Updated template layout, attribute section, attribute data dictionary, GUI details and reference |
| 3 | Draft | M.A. Gariplan | 27 Aug 2021 | Added Assumption on Underlier ID tooltip |

| Title | COMMODITIES FORWARD Single Index Template Definition | | | | | | |
|------------------|--|-----------------|--------------|--|--|--|--|
| Background | The following CRF presents a specification for the generation and retrieval of a | DSB-ID | UPI-0335 | | | | |
| | Unique Product Identifier for the following product: | Туре | New Template | | | | |
| | Commodities : Forward : Single_Index | Owner | J.Lim | | | | |
| | | Version | 3 | | | | |
| | | State | Draft | | | | |
| Terms of Referen | ce | | | | | | |
| Scope | This CRF specifies the product definition required for the generation / retrieva This CRF covers both the input (Request) and output (Record) templates. Support for local jurisdiction / alternate underlier identifier input is currently of Support for CFI 2019 values is currently out of scope. | | | | | | |
| Requirements | The product definition will conform to ISO 4914 (UPI). Where possible, the product definition is to be based on the attributes, values OTC ISIN. The product definition will return a product short name (FISN). All UPI records stored on the DSB RDL will include the ISO 10962 (CFI) code assequivalent text value for all attributes that are included in the definition of the second stored on the definition of the second stored sto | sociated with t | | | | | |
| Dependencies | This specification is dependent on final sign-off of the ISO 4914 (UPI) specification. This specification is dependent on PC approval for the use of the OTC ISIN definitions as a basis for the UPI. This specification is dependent on PC approval for the inclusion of ISO 4914 (UPI) conditional attributes. This specification is dependent on TAC Approval for the DSB approach to ISO 10962 (CFI:2019) migration. This specification is dependent on the provision of a human-readable alias for the primary underlier for inclusion in the Short Name (FISN) and a human-readable alias for the Contract Specification. The format of the Short Name is dependent upon the outcome of the ISO 18774 (FISN) systematic review. | | | | | | |
| Assumptions | This specification assumes that, unless stated, all values and behaviours are based on those of the equivalent OTC ISIN product definition. This specification assumes that no input values are to be defaulted by the system. This specification is based on the current ISO 4914 (UPI) specification (CD) – including attributes that are not currently supported by the equivalent OTC ISIN. This specification is based on the DSB's current equivalent OTC ISIN product definition. This specification is based on the attributes and values defined in ISO 10962 (CFI:2015). In order to provide an example Short Name, this specification defines a format for this attribute that may not conform to the eventually agreed FISN format for the UPI. This specification assumes that the Short Name is defined using the same attributes (where available) as the OTC ISIN Short Name. Where possible, this specification derives GUI details from the ISO 4914 (UPI) specification for attributes that are not included in the current OTC ISIN product definition. The display information in the GUI for the existing attributes (and values) are taken from the OTC ISIN. If such information contains an "ISIN" in the description, replace the value into "UPI". The specification of Base Product is based on the DSB's current equivalent OTC ISIN product definition that follows enumerated values based on RTS 23 (EU 2017/585) Table 2 rather than the ISO 20022. | | | | | | |

| • | • The tooltip for the Underlier ID = Commodity Index is removed temporarily to keep in line with the ISIN behaviour until such time that a source provider is appointed for the Commodity Index identifiers. |

| Attributes | See Template Layout (above). | | | | | |
| | a) Other Underlier Type The Request template described in this document supports products that can be defined on the basis of more than one type of underlier. For this product, the user is asked to select one of the following: | | | | | |
| | * Please see Underlier Input Method Document (see Reference Section below) for further details. | | | | | |
| Validation | Underlier ID The following validation will be applied to Underlier ID based on the value selected on Underlier ID Source [INDX PROP] a. INDX • Enumeration list is based on JSON codeset (CommoditiesIndex.json). | | | | | |
| | b. PROP | | | | | |
| | The input text by user must exist in the DSB Proprietary Index Enumeration. The Proprietary index is made on a per asset class and only relevant to the particular asset class based on DSB data. The only exception is asset class "Other" which is applicable to all asset classes. If the input Prop Index does not exist in the DSB Proprietary Index Enumeration, value will be rejected with an error message "Error: Given Index/ices must be an existing and valid Commodity or Multi-Asset Index". | | | | | |
